Printing for
Professionals

Differentiate

Océ helps the people who make our world. Companies everywhere use Océ technical documentation systems in manufacturing, architecture, engineering and construction. Each week, high speed Océ printing systems produce millions of transaction documents such as bank statements and utility bills. And in offices around the world, people use Océ professional document systems to keep the wheels of business and government turning. Océ is also at work in publishing on demand, newspaper production, document management outsourcing and wide format colour for spectacular display graphics. It all helps our professional customers go 'Beyond the Ordinary' in printing and document management.

Differentiate

Océ Colour Portfolio

Océ offers the broadest colour product portfolio in the world. You can trust Océ as your partner for digital colour printing. We have the experience and the expertise to offer the best solution in both small and wide format. Our small format portfolio includes the Océ CS product range, Océ CPS800 and the Océ CPS900 Digital Colour Press.

In continuous-feed small format, the Océ VarioStream 9000 is the perfect growth path to very high volume colour printing. In wide format Océ has a very strong position with the Océ TCS systems, Océ CS systems, Océ Arizona display graphics printers and the Océ-owned Onyx Postershop controllers. Océ has a full colour solution for every application!

Count on 130 years of innovation, knowledge and support

Founded 130 years ago, Océ has proven to be an industry innovator, consistently producing leading-edge hardware and first-class software. Based on that, Océ is able to deliver document systems addressing your requirements.

Océ supports you with a world-class, one-stop service and support organisation. We can even provide financial services and outsourcing. Océ employs industry specialists who understand your business process and know how to enhance them with leading-edge Océ industry solutions. Making us a true business partner.

The CPS900 Platinum has been awarded the prestigious BERTL 4 star Highly Recommended award. BERTL's testing and reports provide a 100% independent, unbiased analysis of the performance of digital devices.

Professional software to meet your requirements

The Océ CPS900 Digital Colour Press can be integrated into your existing PDF workflow. Or with Océ PRISMA software you get an integrated approach to your document supply chain from submission to delivery.

- The Océ 970C and 1070C controllers provide you the performance and functionality you need for demanding applications:
- Based on industry-standard EFI technology
 - Graphic Arts kit and Profiler kit for colour management, including a photo-spectrometer
 - Impose for smart imposition of your documents
 - Support for standard variable data printing formats and software applications

All that adds up to software that supports a professional workflow with consistent high quality output.

Océ CPS900 Platinum
Consistent digital colour press for professionals

How to ensure consistent colour? Usually, hours are spent calibrating a digital printing system week after week. Examining the colours of test print after test print. And hoping for the best. But the Océ CPS900 Digital Colour Press is radically different. It delivers consistent colour throughout your workflow—automatically without calibration. Add to that best-in-class productivity, a sleek new design and flexible growth path—and you end up with the printing system professionals need.

"All of the variables that wreak havoc on other digital printers/presses have all been removed from the equation. Océ has simplified the complexities of digital printing by the development of the Océ CopyPress and Direct Imaging systems," BERTL report.

Consistent digital colour press for professionals

Consistent colour—and high quality imagery

With the Océ CPS900 Digital Colour Press you can be sure of consistent colour—the most consistent on the market. For every possible application—without calibration.

- Increase customer satisfaction through predictable and accurate colour reproduction
- Produce long runs or short runs—and re-print later with worry-free results
- Print on other Océ CPS900's in different locations—with consistent outcomes
- Ensure high quality colours using different screening options for different applications
- Protect the integrity of your customer's corporate identity through groundbreaking levels of colour consistency

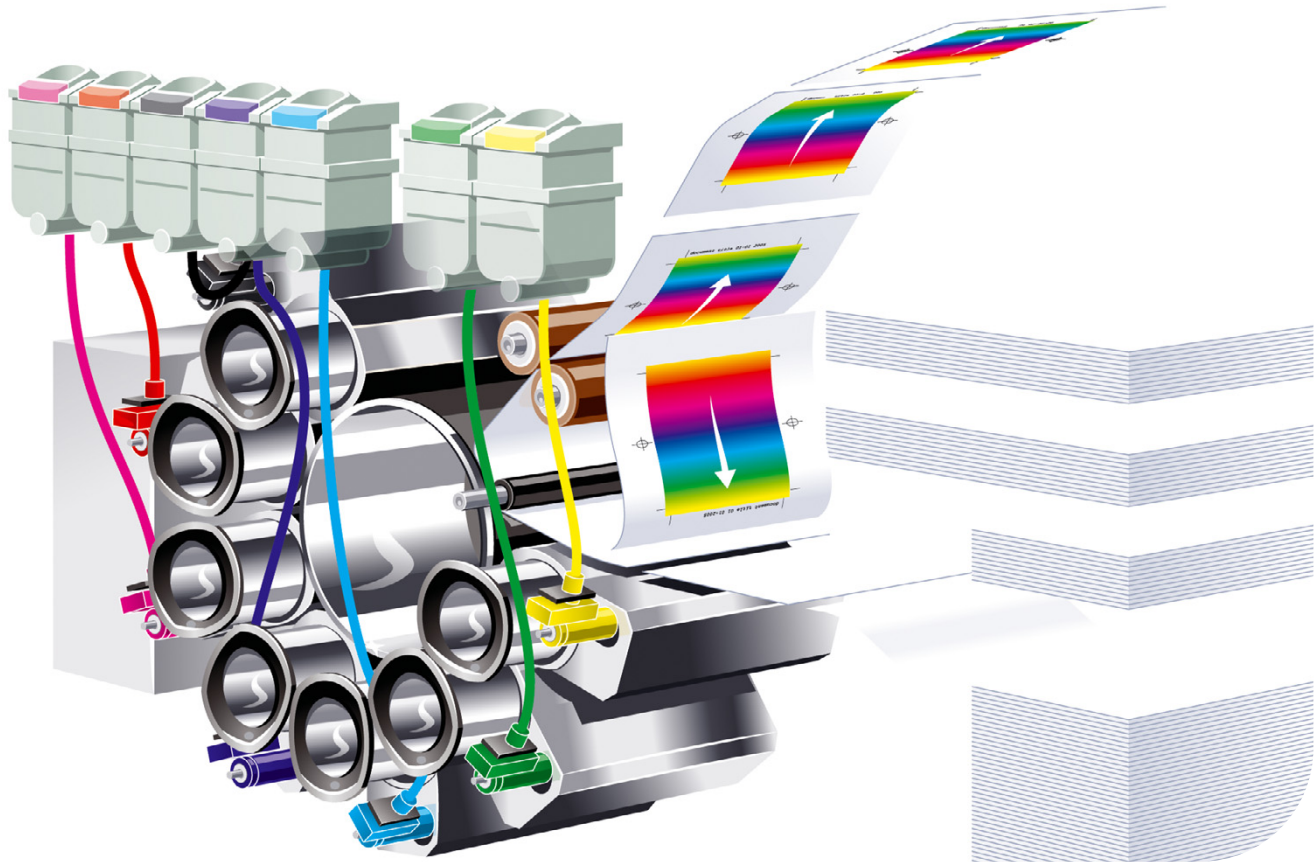

In other words, the most predictable high quality output, at all times.

Reliable printing across a wide range of media

With the Océ CPS900 Digital Colour Press you can print on a uniquely wide range of media for a digital print system.

- Mix different types of media, all at full engine speed
- Print on standard stock as well as textured and recycled paper
- Use media up to 300 g/m² and maintain maximum productivity
- Print on A4, A3 and oversized papers for full bleed applications

In short, a wealth of output choices.

Best-in-class productivity

Rock-solid colour consistency with no calibration and no speed reductions across media types adds up to best-in-class productivity. That was what we had in mind when designing the Océ CPS900 Digital Colour Press. So you enjoy a super-productive, easy-to-use process with numerous benefits.

- Minimise paper jams and ensure most reliable production through a short paper path
- Lift your high production capacity—RIP multiple jobs while printing
- Print single-sided (4/0) or double-sided (4/4) automatically, with the same print speed for every weight
- Duplex documents automatically on every paper size and weight—and enjoy perfect front-back registration via the active registration module
- Produce up to 240,000 full colour impressions per month

And the result? Jobs come out right first time. With significant cost savings in the process.

Océ technology you can trust

The Océ CPS900 Digital Colour Press owes its consistent, high quality colour to unique, patented Océ technology.

Océ Direct Imaging enables the reproduced image to be created in a single step without using a light source. The mono-component toner image of every required colour is transferred directly onto a rubber-coated intermediate drum.

Océ Colour Copy Press technology then 'presses' the complete toner image into the paper for consistent, high quality colour—with the single layer of toner fused at a lower temperature. Because the Océ CPS900 Digital Colour Press system uses virtually no silicon oil, your prints come out with an offset look and feel—and no excessive surface shine. But with beautiful colours every time.

You can also upgrade your production capacity for future growth by adding one or more Océ CPS systems to create an Océ Colour Production Tandem. Océ technology ensures unmatched colour consistency even when prints are produced on two or more engines.
